Project Documentation 1

(POWER BI DASHBOARD & BUSINESS INSIGHTS)

---

1. Dashboard Overview

Three dashboards were created:

1. Executive Overview
2. Product Usage Dashboard
3. Customer Health & Churn Dashboard

---

2. Executive Overview Dashboard

- **KPIs:**

- Total Customers: 500
- Total ARR: 4 Billion
- Total MRR: 330 Million
- Churn Rate: ~22%

➢ **Insights:**

- Revenue is dominated by **Pro & Enterprise plans**
- Churn rate is **~22%,** indicating a significant **retention challenge.**
- A large proportion of customers fall into a **"At Risk"** category.
- A **small** group of customers contributes a **large share of ARR.**
- Churn is distributed across **all plans**, indicating a **broader product or engagement issue.**

---

3. Product Usage Dashboard

➢ **Insights:**

- Majority users are clustered in **low usage range (0–5K)**
- Indicates **low engagement** among most customers
- Higher usage leads to **more support tickets**
- Errors increase with usage → **product stability concern.**
- A small group of customers shows significantly higher usage (power users).

Key Business Insight:

"Low engagement + high errors = higher churn risk".

---

4. Customer Health & Churn Dashboard

Insights:

- **241 customers are At Risk vs 46 Healthy**
- **Health score (46)** strongly correlates with **churn**
- Customers with low usage and low satisfaction are more likely to churn

Support Insight:

- **Most customers** have **fewer tickets** but still show **low satisfaction**
- Indicates **silent dissatisfaction or low engagement**

Key Business Insight:

"Low engagement and poor support experience drive churn"

---

5. Business Recommendations

- Improve onboarding to increase product usage
- Reduce product errors and bugs
- Improve customer support response time
- Focus on retaining high-value customers

---

6. Conclusion

This project demonstrates an end-to-end SaaS analytics workflow:

- Data cleaning and transformation (Python)
- Analytical querying (SQL)
- Visualization and storytelling (Power BI)

Final Outcome:

- Identified churn drivers
- Analyzed customer engagement
- Built actionable business dashboards

---

7. Future Scope

- Add time-based trend analysis (event-level data)
- Build machine learning churn prediction model
- Deploy dashboard for real-time monitoring

⭐ FINAL NOTE

This project showcases strong analytical skills, business thinking, and the ability to convert raw data into actionable insights suitable for real-world SaaS companies.
